**GREEN PASTURES
DAVE WETZEL
BOX 486
ONEILL NE 68763****REPORT OF ANALYSIS****For: (20595) GREEN PASTURES
FERMENTED COD LIVER OIL
FCLO 20946ABS****Detailed Method Description(s)****Fatty Acid Profile**

Sample prep follows MWL HPLC 008 and analysis follows HPLC 004 which are both based on AOAC 996.06. The fat in the sample is extracted and saponified and the fatty acids methylated to form the fatty acid methyl esters (FAMES). The methyl ester extract (FAMES) is injected into a GC that uses a flame ionization detector (GC/FID). The response generated during analyses of the individual FAME is compared to standards which are used to quantitate the levels of fatty acids found in the sample. The standard reporting level is 0.01% of the fat.

Peroxide value

Peroxide value analysis is carried out using FO 033 which is based on AOAC 965.33 and AOCS Cd 8b-90. Samples are treated with a solvent that removes the fat and the fat-solvent solution treated with potassium iodide. The solution is titrated with sodium thiosulfate to measure the free iodide. A calculation is carried out to measure the peroxide value.

Anisidine value

Analysis follows MWL FO 063 which is based on modified AOCS Cd 18-90. The fat in a sample is extracted and then dissolved into iso-octane. The p-anisidine reagent is added and the resultant solution read at 350 nm.

Fat (acid hydrolysis)

Analysis follows MWL FO 08 which is based on AOAC 922.06. The homogenized sample is treated with hydrochloric acid and then washed at least twice with both petroleum ether and diethyl ether and the solution placed in a pre-weighed container. The ether solution, which contains the dissolved fat, is evaporated and the percent fat determined by the weight gain of the beaker.

Free fatty acids (foods)

Analysis follows MWL FO 032 which is based on AOCS 5a-40. Fat samples are weighed and placed in a container with 50 mL of neutralized alcohol and then titrated to pink end-point using standard (0.1N) sodium hydroxide. The mLs of titrant is entered into a calculation to determine free fatty acids as a percent of total fat.

The result(s) issued on this report only reflect the analysis of the sample(s) submitted.
